## **Abstract**

This study examines the evolving self-concept of the advertising industry amidst technological and social disruptions, exploring tensions within advertising's self-perception. Using structuration theory, it delves into moral, persuasive, and creative dimensions through a Delphi study. Findings reveal declining cultural significance, a heightened need for legitimacy, and reduced power within advertising. The discourse reflects a critical self-assessment, challenging traditional modalities. Notably, shifts towards authenticity and corporate responsibility diminish advertising's impact, while technological advancements prioritize data-driven approaches, eroding creativity. The study underscores conflicts between creative ideals and pragmatic demands, as well as between short-term sales goals and long-term sustainability objectives. Advertisers seek to balance persuasion with morality, impacting cultural significance. To address these challenges, a modality management approach is proposed that combines the persuasive, ethical and creative essence of advertising in evolving contexts. This research contributes nuanced insights into advertising's evolving self-concept amidst transformative disruptions.
